SWITCH PLATE LUBRICANT

With more than a 120 years in the lubricant industry, Whitmore Rail continues to set the lubrication standard for the most adverse conditions and demanding applications.

BioSwitch™ is a high-performance, biodegradable lubricant that's designed to keep your rail switch plates operating smoothly for years to come. Its robust chemistry allows for easy application in any weather and optimal resistance to water and dirt. In fact, it can be applied to wet switches and won't wash off in the rain.

Once applied, by pouring, brushing or spraying, on operating switches, BioSwitch develops into a dense, protective coating without becoming overly dry or powdery. As the switch operates, this lubricant "plates out" and the protective coating becomes denser in the contact area to keep your switches in peak operating condition.

BioSwitch™ has been certified by the USDA as biobased, and has earned USDA BioPreferred designation. Its biodegradability was proven using the Modified Sturm test.

Packaging: Available in pails, kegs, drums, and disposable bulk totes. It's also available through a bulk lubricant delivery system that can be designed to meet your operational needs.

- **Low friction coefficient**
- **Long lasting protection**
- **Biodegradable**
- **USDA Certified**
- **Wide operating temperature**
- **Easy application**
- **Contamination resistant**
