**Use less. Protect more.
Simply the best.**

Superior wear protection. Unmatched carry down.

RAIL CURVE LUBRICANT

With more than 120 years of experience in the lubricant industry, Whitmore continues to set the standard for the industry's toughest and most demanding applications. Now, Whitmore takes rail curve protection, and the resulting cost-savings, to the next level with the introduction of RailArmor® railroad track curve lubricant.

RailArmor high performance wheel-flange grease is a new-generation superior product resulting from a major R&D initiative by Whitmore. It greatly increases carry distance down the track and reduces consumption where additional carry has no benefit.

With RailArmor, Whitmore has raised the bar in all critical performance areas such as rail adhesion, rain resistance, wear protection and carry down from the wiping bar. The product doesn't spatter when hit by the wheel or form strings that contaminate the area around the wayside.

In addition, RailArmor slumps evenly in the wayside reservoir and doesn't cause pump cavitation. In the wayside reservoir, it moves cleanly down the walls with minimal vortex effect, despite its adhesiveness and robust consistency.

- **CARRY DOWN** - carries farther than any competitive products. In areas where additional carry has no benefit, consumption can be reduced by as much as 50%.

- **WEAR PROTECTION** - high content of solid lubricants and oil-soluble anti-wear additives ensures low friction and wear.
- **COMPATIBLE** - can be added to wayside tanks that currently contain either lithium or calcium-based greases.
- **RESISTS WATER** - excellent rail adhesion and water resistance.
