## **Whitmore® Rolls-Out State-of-the-Art Filtration Units**

### *Advanced Filtration Units in Stationary and Portable Configurations*

Rockwall, Texas, April 8, 2016 – Whitmore, a CSW Industrials Company and leading provider of innovative products and services which increase the reliability, productivity and lifespan of industrial assets, is pleased to announce a line of ground-breaking filtration units that are the product of extensive market insights and design work.

Whitmore's OilSafe® product line is an industry leader in lubrication management and contamination control. With the introduction of OilSafe Filtration Units, Whitmore is expanding its family of products that increase the lifespan of industrial fluids and equipment. These Filtration Units maintain purity from storage to application and promote workplace safety with redundant spill containment. "In the past changing filter cartridges on a unit has been a messy task, with oil leaking on the floor causing a safety hazard. Our units have removable spill containment vessels which allow operators to easily dispose of waste oil after using the unit," said Steve Anderson, Director of Innovation at Whitmore.

In addition to filtering contaminants from industrial oils that extend their service life, these units also eliminate the potential for cross-contamination by using color-coded, error-proof connectors.

"Fluid filtration units have been around for some time, but the OilSafe difference is in how we've enhanced the product with a robust new design that holds up in demanding industrial environments, and added innovative features that solve the problems our customers are experiencing with comparable products in the market," said Douglas Reid, Vice President of Product Development. "These units are available in both stationary and portable configurations and fit with our industry leading OilSafe line of color-coded lubrication management systems."

### **About Whitmore**

Established in 1893, Whitmore is a global leader in providing innovative products and services that increase the reliability, performance and lifespan of industrial assets. We manufacture reliability products, high performance lubricants, friction modifiers, application and inspection equipment, lubrication management systems, coatings and cleaners designed to meet the specific needs of each industry and application. Industrial customers worldwide rely on Whitmore to deliver the performance engineered solutions industry counts on even in the most adverse conditions and demanding environments.
